PROFESSIONAL SUMMARY

Motivated and detail-oriented MCA graduate with strong foundation in Machine Learning, Data Science, and AI technologies. Experienced in building end-to-end ML models, customer segmentation systems, and AI-powered applications using LLM and RAG architecture. Proficient in Python, SQL, Power BI, and Vector Databases. Seeking entry-level roles in Data Science, Machine Learning, or AI Engineering to apply analytical and problem-solving skills in real-world projects.

TECHNICAL SKILLS

Programming Languages:

Python, SQL

Python Libraries:

NumPy, Pandas, Matplotlib, Seaborn, SciPy, Scikit-learn, TensorFlow

Machine Learning & AI:

Supervised Learning, Unsupervised Learning, Clustering, Classification, Regression, Model Evaluation, Feature Engineering

Generative AI & LLM:

LLM Integration, Retrieval-Augmented Generation (RAG), Prompt Engineering

Vector Databases:

FAISS, Pinecone, ChromaDB

Data Visualization & Tools:

Power BI, Microsoft Excel

Core Concepts:

Statistics, Probability, Data Analysis

EDUCATION

Master of Computer Applications (MCA)

Kakatiya University, Warangal

2023 – 2025 | CGPA: 7.75

Bachelor's Degree

Sri Sai Triveni Degree & PG College, Suryapet

2019 – 2022 | CGPA: 9.45

PROJECTS

Customer Segmentation Using Machine Learning (Final Year Project)

- Built a customer segmentation model for E-commerce to identify high-value leads.
- Applied clustering techniques such as K-Means to group customers based on purchasing behaviour.
- Performed data preprocessing, feature engineering, and exploratory data analysis using Pandas and Matplotlib.
- Improved marketing targeting strategy by identifying profitable customer segments.

AI-Powered Document Q&A System (LLM + RAG)

- Developed an intelligent document question-answering system using LLM and RAG architecture.
- Integrated vector databases (FAISS / Pinecone / ChromaDB) for efficient semantic search.
- Implemented document embedding and retrieval pipeline for contextual responses.
- Built backend logic using Python and deployed locally.

End-to-End Machine Learning Prediction Web Application

- Built a complete ML pipeline from data preprocessing to model deployment.
- Trained and evaluated prediction models using Scikit-learn.
- Developed a user-friendly web interface for predictions.
- Integrated model with frontend to deliver real-time predictions.

CERTIFICATIONS

- **IBM Skills Build** – Data Science with Python, Data Analysis with Python, Machine Learning with Python , Data Visualization with Python
- **Cisco Networking Academy** – Python Programming
